

Issue 9: Modelling comments from Statistics Finland

From Statistics Finland

3) Incorporate the distinction between abstract/conceptual models describing statistical production in general and logical models describing specific workflows.

4) Improve the model's ability to describe iterations and parallel workflows.

5) Make recommendations on how to use the model in workflow modeling.

Provide concrete examples.

- Please leave room for the use of different modeling notations such as BPMN and UML.

6) Possibly define a set of possible roles for modeling.

- These should be used in swimlane diagrams.

- Common role definitions would be useful when discussing processes internationally.

7) Alternatively, possibly extend the model to incorporate business services (internal and external)

- Such as administrative data receipt service, which could be decentralized or centralized.

- This would help to abstract away functional structures when comparing different organisations.

- Admittedly this is probably too ambitious.

Please indicate your support for this change using the stars and legend below

- 5* (We should do this)
- 4* (Good idea, but need to discuss)
- 3* (I am not sure, we need to discuss)
- 2* (Should not make the change, but need to discuss)
- 1* (Should not make this change)
