

Manual on Victimization Surveys

1) Basic Information

Training material title
Manual on Victimization Surveys
Brief description and comments

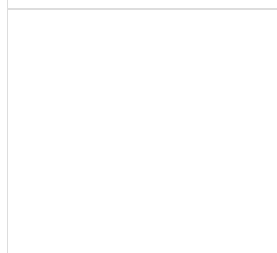

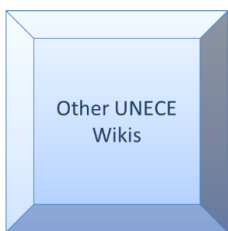

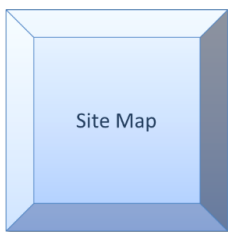

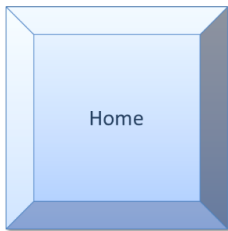

This manual is the first attempt to develop methodological guidelines at the international level for the design of victimization surveys. The Manual provides a comprehensive source of information for developing national victimization surveys and will be particularly useful for those countries who may be embarking on a survey of this type for the first time. The ultimate goal of the Manual is to improve the comparability of victimization survey results. The Manual provides a minimum dataset of suggested key topics for inclusion in national crime victimization surveys that will further facilitate international comparability of crime survey results.

Main category

Demographic and Social Statistics
