

## 3.3 Multi-domain statistics and indicators (UNESCO)

### 3.3.3 Information society (UNESCO) Measuring Information Society

#### Work Programme

#### Ongoing methodological work:

The UIS is supporting the UNESCO's Communication and Information (CI) Sector to develop a framework to measure core 'information society skills' for teachers. In particular, the Institute has established an international technical advisory panel to help validate cost-effective methodologies that will be made available to countries for their own assessments needs.

#### Priority objectives beyond 2011:

- Establish two regular surveys on media statistics and the use of information and communication technologies (ICT) in education.
- Pilot-test and validate modules for measuring core skills associated with knowledge societies.

#### New work to be undertaken in 2011:

- Promotion of a new series of internationally comparable statistics on ICT in education by producing a regional report on ICT integration in education in Latin America and the Caribbean.
- Pilot-testing and validation of the new media survey reflecting emerging trends in print, broadcast, mobile and online media.
- Technical support to the UNESCO CI Sector on the development of methodological tools for measuring skills associated with knowledge societies.

#### Meetings to be organized in 2011:

- Validation workshop with countries piloting the media survey pilot to be organized in Mozambique. **3.3.5 Indicators related to the Millennium Development Goals (UNESCO)**

#### Data for MDGs

- UIS is responsible for providing the data for monitoring the international education indicators as part of the MDGs, namely goals 2 and 3.
