Active Ageing Index

The Active Ageing Index (AAI) is a composite index of three variables: employment, disability and healthy life expectancy. It is based on the best available data on employment, disability and healthy life expectancy. The AAI is calculated as the sum of the three variables, each weighted equally.

--	--	--	--

DOMAINS	 Employment	 Participation in Society	 Independent, Healthy and Secure Living	 Capacity and Enabling Environment for Active Ageing
INDICATORS	Employment Rate 55-59	Voluntary activities	Physical exercise	Remaining life expectancy at age 55
	Employment Rate 60-64	Care to children and grand children	Access to health services	Share of healthy life expectancy at age 55
	Employment Rate 65-69	Care to older adults	Independent living	Mental well-being
	Employment Rate 70-74	Political participation	Financial security (three indicators)	Use of ICT
			Physical safety	Social connectedness
		Lifelong learning	Educational attainment
