GSIM and DDI working together

GSIM's conceptual model and DDI's state-of-the-implementation standards for GSIM

The conceptual model of GSIM and the state-of-the-implementation standards for GSIM are working together to support the production of official statistics. The conceptual model of GSIM is a reference framework of internationally agreed definitions, attributes and relationships that describe the pieces of information that are used in the production of official statistics (information objects). The state-of-the-implementation standards for GSIM are a set of standards that describe the production process of official statistics.
