

The X-12-ARIMA Seasonal Adjustment Program

1) Basic Information

Training material title
The X-12-ARIMA Seasonal Adjustment Program
Brief description and comments

X-12-ARIMA is the widely used seasonal adjustment software produced, distributed, and maintained by the Census Bureau.

- 1.Extensive time series modeling and model selection capabilities for linear regression models with ARIMA errors (regARIMA models)
- 2.Many seasonal and trend filter options
- 3.Diagnostics of the quality and stability of the adjustments achieved under the options selected
- 4.The ability to efficiently process many series at once

Main category

Economic Statistics
