

United Nations Population Division

1. Demographic and social statistics (UN Population Division)

1. Demographic and social statistics (UN Population Division)

1.1 Population and migration (UN Population Division)

Population and Migration Statistics

Analysis and studies:

- Information and analysis on population trends and policies;
- Population estimates and projections for all countries, geographical areas, urban and rural areas and major cities;
- Analytical work in the fields of fertility; contraceptive use; mortality including HIV/AIDS; internal migration; international migration; population growth and ageing; the interrelationship of population, resources, environment and development, including social and economic aspects; and studies on population and development policies related to the above;
- Implementation of 2009 Revision of the official United Nations estimates and projections of urban and rural areas and major cities;
- Implementation of the 2010 Revision of the Global Migrant Stock: International Migrants by Age (estimates of the international migrant stock by country of residence, sex and age, 1990 - 2010);
- Implementation of the 2010 Revision of International Migration Flows To and From Selected Countries (annual data on international migration flows to and from industrialized countries);
- Implementation of wall chart International Migration 2011 (indicators on international migration and development trends and policies by country of residence);
- Implementation of the 2011 World Fertility Report, with data on over 20 fertility-related measures over time from a variety of sources, including civil registration, population censuses and nationally representative sample surveys. Data on government views and policies on fertility are also included. A separate wall chart on fertility patterns worldwide will be produced;
- Release of World Contraceptive Use 2010, a comparable and up-to-date set of national data on contraceptive prevalence and unmet need for family planning for almost all countries and areas of the world. The data points are expanded from prior versions to go back to as early as 1950, and additional tables are included to show method-specific trends over time and across countries;
- Develop a Bayesian hierarchical model of contraceptive prevalence to generate trends in contraceptive prevalence from 1970 to 2015, given that about one-third of countries worldwide have no more than two national-level data points over this time period.

Dissemination:

- Dissemination of world-wide population information through the United Nations Population Division web site (www.unpopulation.org).
 - Release of the 2010 Revision of World Population Prospects, with an expanded time horizon to 2100, in March 2011.
 - Dissemination of data on the international migrant stock by country birth, citizenship, sex and age through the Global Migration Database (accessible through www.unmigration.org).
-

3. Environment and multi-domain statistics (UN Population Division)

1.1 Population and migration (UN Population Division)

3. Environment and multi-domain statistics (UN Population Division)

3.3 Multi-domain statistics and indicators (UN Population Division)

3.3 Multi-domain statistics and indicators (UN Population Division)

3.3.2 Gender and special population groups (UN Population Division)

Gender analysis and gender factors are included in all studies in the field of population and development (See also Statistical Area 1.1).**3.3.5**

Indicators related to the Millennium Development Goals (UN Population Division)

The Population Division is active participant in the Inter-agency and Expert Group on MDG Indicators (IAEG) and is responsible for the following MDG indicators under Target 5B: Contraceptive prevalence rate, Adolescent birth rate and Unmet need for family planning. The Population Division is also a member of the Inter-agency Group for Child Mortality Estimation (IGME) that is responsible for the reporting the under-five mortality rate.

5. Strategic and managerial issues of official statistics (UN Population Division)

3.3 Multi-domain statistics and indicators (UN Population Division)

5.2 Statistical programmes, coordination within statistical systems (UN Population Division)

The Population Division participates in the activities of the Committee for the Coordination of Statistical Activities (CCSA).

The Population Division organizes the annual Coordination Meeting on International Migration. Through this and other mechanisms, dissemination of migration data and migration estimates are being discussed and coordinated.

5. Strategic and managerial issues of official statistics (UN Population Division)

1. Demographic and social statistics (UN Population Division)

5.2 Statistical programmes, coordination within statistical systems (UN Population Division)

The Population Division participates in the activities of the Committee for the Coordination of Statistical Activities (CCSA).
